3 Introduction

3.1 Project Summary

3.1.1 Objectives

The objective of this product is to develop a Wishlist and comparison feature that allows users to save hotels, return to them later and compare them, in order to increase sales through personalisation.

The product will allow users to: create multiple separate lists of saved hotels (e.g. for different trips); receive personalized notifications when the price of a saved hotel drops or when the number of available rooms becomes critically low; compare saved hotels with each other; share a list with family or friends via link to discuss their choice.

The feature supports the business goal of stimulating sales through personalization. The data about hotels saved by users will serve as a basis for marketing, enabling personalized discounts and reminders. Sharing lists with friends and family will also attract new users to the platform.

The product will interact with: user authentication system, to link lists to a user account and make them available across devices; hotel listing database, to retrieve current prices, availability and hotel attributes for notification and comparison; notification service, to deliver price alerts to users; marketing system, to provide wishlist data for personalised offers.

3.1.2 Background

Travelmate is focusing on deferred demand: cases where users view hotels but book later. To understand these scenarios, a user survey and an interview with the business owner were conducted.

The survey showed that users often plan trips well in advance or for different purposes (e.g. vacation, a business trip, a weekend getaway), so they need several separate lists rather than a single general one. Users also want to compare saved hotels side by side on parameters such as distance to the sea or city center, breakfast availability and total price, and to be notified when the price of a saved hotel drops or when the number of available rooms becomes critically low.

The owner sees the wishlist as a basis for personalized discounts and reminders.

The expected benefit is that saving, comparing and receiving reminders about hotels will help users return to their choices and complete bookings, which will increase sales.

3.1.2.1 Business Drivers

The development of this feature is driven by several business needs:

- Increase sales through personalization
- Attract new users to the platform
- Gain a data basis for marketing based on the hotels users save

3.2 Project Scope

3.2.1 In Scope Functionality

- Creation of multiple separate lists of saved hotels for authorized users.
- Editing and deleting existing lists.
- Adding and removing hotels to and from lists.
- Access to lists of saved hotels in the user's personal account.
- Comparing saved hotels with one another.
- Ability to share the list of saved hotels online.
- Notifications to the user when the price of a saved hotel drops or when the number of available rooms becomes critically low.
- Ability to add hotels to a temporary list of saved hotels without logging into a personal account.

3.2.2 Out of Scope Functionality

- Sending personalised discounts and marketing campaigns to users (the feature only provides data for marketing)
- Personalised recommendations and advertising
- Sorting and filtering saved hotels by city or dates

3.3 System Perspective

3.3.1 Assumptions

3.3.2 Constraints

3.3.3 Risks

3.3.4 Issues

4 Business Process Overview

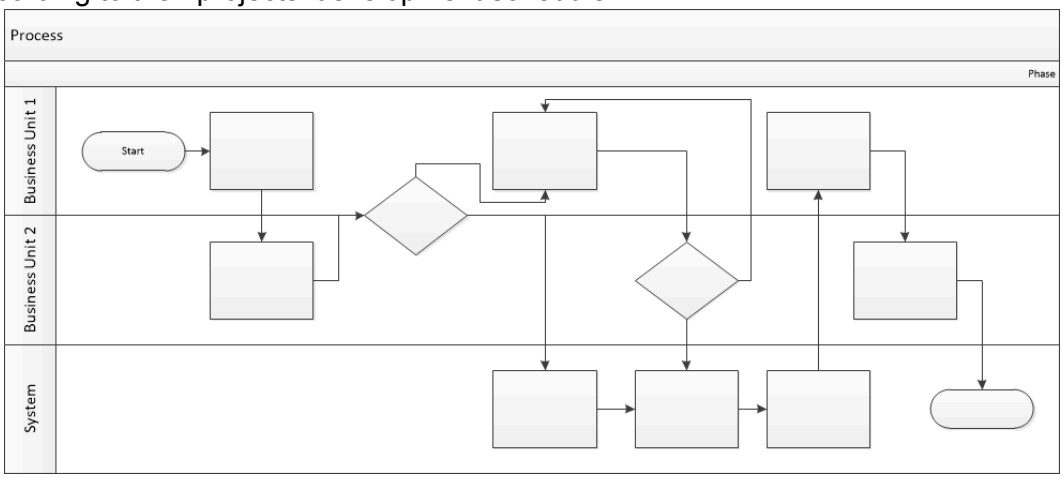

[Describe how the current process(es) work, including the interactions between systems and various business units. Include visual process flow diagrams to further illustrate the processes the new product will replace or enhance.

Use case documentation and accompanying activity or process flow diagrams can be used to create the description(s) of the proposed or "To-Be" processes.]

4.1 Current Business Process (As-Is)

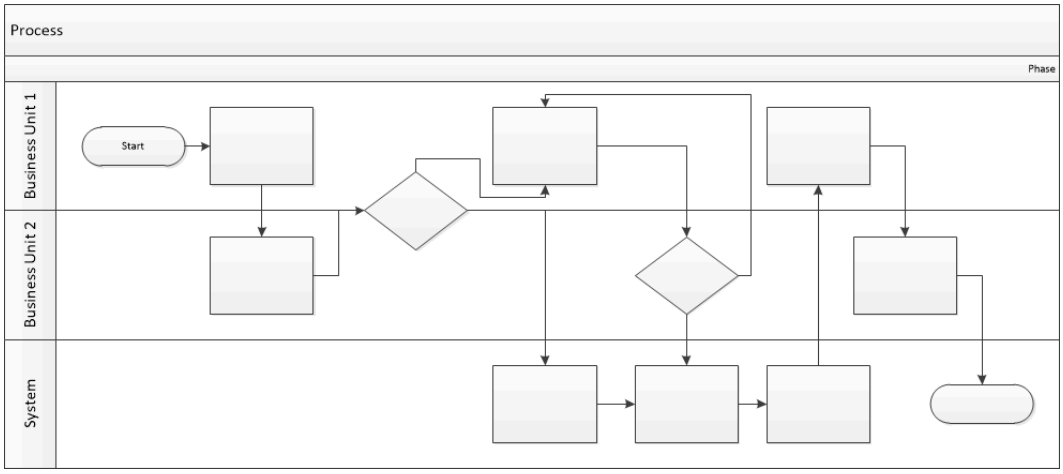

At any point during or after deployment of web apps or web sites (internal or external) to support business activities, development/support teams may create and deploy widgets.

1. CMS / database administrators for the employee portal use the CMS tool to create widgets. They can test widgets in the designated staging environment, then register them and deploy to production.
2. Development teams may deploy widgets to development and testing environments set up for their development projects. They must check widget code into and out of the source code repository according to their projects' development schedule.

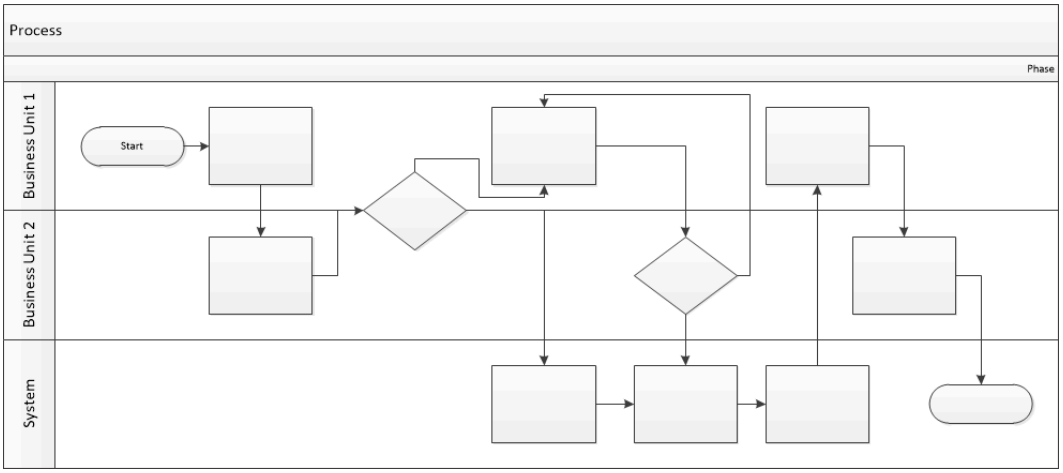

4.2 Proposed Business Process (To-Be)

1. Technical Lead searches repository
2. If widget is not found, user creates a new widget name record.
3. WINS validates that all fields have been completed.
4. WINS confirms that no similar widgets exist
5. User confirms record to be created.

1. User searches repository to locate existing widget description.
2. WINS displays record
3. User selects Edit to open and modify record
4. WINS validates all fields completed correctly
5. User confirms changes.
6. WINS confirms changes and updates Audit table.

5 Stakeholder Requirements

SR-001: User must be able to create multiple lists of saved hotels.

SR-002: User must be able to add and remove hotels from the list.

SR-003: User must be able to compare saved hotels with each other.

SR-004: User must be able to share a list with family or friends.

SR-005: User must receive a notification when the price of a saved hotel drops or the number of available rooms becomes critically low.

SR-006: User must be able to add hotels to a temporary list without logging in.

SR-007: User must be able to keep the hotels added before logging in and access their lists from different devices after logging in.

SR-008: Business owner must be able to use data about saved hotels for personalized discounts and reminders.

The requirements in this document are prioritized as follows:

Value	Rating	Description
1	Critical	This requirement is critical to the success of the project. The project will not be possible without this requirement.
2	High	This requirement is high priority, but the project can be implemented at a bare minimum without this requirement.
3	Medium	This requirement is somewhat important, as it provides some value but the project can proceed without it.
4	Low	This is a low priority requirement, or a “nice to have” feature, if time and cost allow it.
5	Future	This requirement is out of scope for this project, and has been included here for a possible future release.

5.1 Functional Requirements

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
General / Base Functionality					
FR-G-001	1	The system shall allow the user to create multiple lists of saved hotels.	Allow user to organize hotels for different trips and purposes.	TBD	User
FR-G-002	2	The system shall allow the user to name a created list.	Help users tell lists for different trips apart.	TBD	User
FR-G-003	2	The system shall allow the user to delete a created list.	Allow users to remove lists they no longer need.	TBD	User
FR-G-004	3	The system shall allow the user to create up to 25 lists for a single authorized account.	Keep data storage and performance under control.	TBD	User
FR-G-005	1	The system shall allow the user to view all saved lists on the “Favourites” tab.	Give users access to all their lists in one place.	TBD	User
FR-G-006	1	The system shall allow the user to add hotels to a list and remove them from it.	Enable users to manage the hotels they are interested in.	TBD	User
FR-G-007	3	The system shall allow the user to add up to 200 hotels to each list.	Keep lists manageable and the system stable.	TBD	User
FR-G-008	2	The system shall mark hotels that have already been added to “Favourites”.	Show users which hotels they have already saved.	TBD	User

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
FR-G-009	1	The system shall allow the user to compare up to 6 saved hotels with each other.	Help users choose between hotels by comparing key parameters.	TBD	User
FR-G-010	1	The system shall offer criteria (price, breakfast included, rating) for comparing saved hotels.	Base comparison on the parameters that matter most when choosing a hotel.	TBD	User
FR-G-011	2	The system shall allow the user to share a list via a link.	Allow users to discuss their choice with family or friends.	TBD	User
FR-G-012	2	The system shall require user-owner authorization to edit and share the list.	Protect lists from unwanted changes by others.	TBD	User
FR-G-013	3	The system shall allow the owner to set time limits for third-party access to the saved list.	Let owners control how long others can see the list.	TBD	User
FR-G-014	1	The system shall send a notification to the user when the price of a saved hotel drops.	Help users book a saved hotel at a better price.	TBD	User
FR-G-015	2	The system shall send a notification to the user when the number of available rooms becomes critically low (less than TBD rooms).	Help users book before a saved hotel sells out.	TBD	User
FR-G-016	2	The system shall allow the user to turn off notifications.	Let users control the notifications they receive.	TBD	User

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
FR-G-017	1	The system shall allow the user to add hotels to a temporary list without logging in.	Allow users to save hotels without registration.	TBD	User
FR-G-018	2	The system shall retain data from the temporary list for up to 30 days.	Give users time to return to saved hotels without registering.	TBD	User
FR-G-019	1	The system shall automatically transfer hotels from a temporary list to the user's account when the user logs in.	Ensure hotels saved before login are not lost.	TBD	User
FR-G-020	2	The system shall save the user's lists, to the user's account and make them available on all devices where the user logs in.	To prevent loss of saved hotels and allow users to return to them from any device.	TBD	User
FR-G-021	2	The system shall make data about hotels saved by users available for marketing purposes, such as personalized discounts and reminders.	Enable personalized marketing to increase sales.	TBD	Business owner
Security Requirements					
FR-S-001	1	The system shall require the user to log in, in order to keep lists permanently and access them from different devices.	Link saved lists to a user account.	TBD	User
Reporting Requirements					

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
FR-R-001	2	The system shall provide the business owner with a report on the most popular hotels on the lists.	Help the business identify popular hotels for targeted discounts.	TBD	Business owner

5.2 Non-Functional Requirements

[Include technical and operational requirements that are not specific to a function. This typically includes requirements such as processing time, concurrent users, availability, etc.]

ID	Requirement
NFR-001	The system must support at least 8,000 [TBD] concurrent users without exceeding the response time defined in NFR-002.
NFR-002	The system must open a list of saved hotels in no more than 3 seconds under a stable internet connection.
NFR-003	The system must not delete or modify users' saved hotels and lists unless the user performs the action.
NFR-004	The system must store users login credentials only in hashed form with a unique salt, and transmit them only over encrypted connections (TLS), in line with OWASP recommendations.
NFR-005	The system must protect collected user data in compliance with applicable personal data protection legislation [TBD].
NFR-006	The system must send price and availability notifications within [TBD] minutes after the change is detected.

6 Appendices

6.1 List of Acronyms

[If needed, create a list of acronyms used throughout the BRD document to aid in comprehension.]

6.2 Glossary of Terms

[If needed, identify and define any terms that may be unfamiliar to readers, including terms that are unique to the organization, the technology to be employed, or the standards in use.]

6.3 Related Documents

[Provide a list of documents or web pages, including links, which are referenced in the BRD.]
